Disc Disease • Posterior Facet Syndrome • Sciatica*

With a series of non-surgical treatments you will begin to enjoy the freedom from back pain. Decompression therapy is fast, effective and safe. This exciting technology is cleared by the FDA and available to you today!

Decompression System Treatment Procedure

Phase I consists of a 4-7 minute unattended Light Therapy Treatment. By pre-treating prior to Decompression, the patient benefits from relaxation of muscle spasms, and relief of minor muscle and joint ache.

Phase II consists of decompressing the intervertebral discs relieving pain associated with herniated discs, degenerative disc disease, sciatica, arthritis, or pinched nerves.
